SUMMARY

I have more than 8 years of experience in customer support, quality analysis, operations and data. I can be the friendly voice talking directly with customers, and I can also be the one working behind the scenes: finding the root cause of problems, organizing and cleaning data, making reports and dashboards, and building small tools and automations that make the team's work easier. I like to understand the real problem first, then find a simple and practical way to solve it. I am also interested in building things that help the business and other people, like creating tools to replace or improve legacy ones, designing websites, and integrating different backend systems, and I want to stay involved in maintaining and supporting them as they grow. I try to communicate clearly, stay patient, and keep learning, so I can work well with customers, teammates and technical people.

SKILLS

Customer support and communication: Customer-facing support (inbound issues, account concerns, technical troubleshooting), ticket handling in Zendesk and 8x8, explaining technical things in simple words, patience with upset customers, clear escalation reports

Data and reporting: SQL, PostgreSQL (Supabase), Dataverse, Power Query / M, Power BI, Excel, data cleaning and consolidation, star-schema modeling, ETL, dashboards and structured reports

Building and automation: JavaScript, Node.js, Express, Python, R and Shiny, HTML/CSS, REST APIs, webhooks, n8n, Power Automate

Tools and integrations: SharePoint, Stripe, PayPal, Zendesk, 8x8, Mailchimp

Working style: Root-cause analysis, clear documentation, working independently while remote, teamwork across departments, willing to learn

EXPERIENCE

Cambridge University Press & Assessment Hybrid, Philippines

Data Analyst

- I organize and catalog data from different systems so the teams know what data we have, what it means, and how to use it.
- I help set and monitor data quality standards, making sure our shared data is complete, accurate and updated on time, so leaders can decide with more confidence.
- I work as the link between the business teams and the technical architects, and I help translate what the business needs into clear data specifications and rules.
- I provide data and reporting support for important company initiatives, such as sustainability tracking and work across departments.
- I make simple reports and dashboards so leaders can follow progress, see trends and check performance, even without technical tools.

School Approval Officer

- Built an internal exceptions database to replace a messy Excel workbook. I cleaned and combined six sheets using Power Query (M) into one structure in Dataverse, then added a JavaScript search page on top. The team is now using it every day.
- Listened to the daily difficulties of my teammates and turned them into a proper data model and a working tool, with their feedback along the way.
- Reviewed and processed school affiliation applications, prepared reports, and followed up with other teams so the applications kept moving.

Art Storefronts Remote (US-based company)

Technical Support Representative

- First point of contact for customers of an e-commerce platform for artists. I helped them solve problems with payment gateways (Stripe, PayPal, Payoneer), domain providers (GoDaddy, WordPress, Wix) and email tools (Mailchimp).

- Checked broken API connections and webhook settings, found the root cause, and wrote clear escalation reports so the engineers could fix it faster.
- Fixed and customized customer websites using HTML, CSS, JavaScript and the database, and helped set up Meta Business and Google Analytics.
- Set up and tested ad automation and automated replies for Instagram and Facebook, helped with discount codes, and gave advice on shipping, taxes and marketing.
- Worked with a US-based team, remotely and independently, while keeping customers updated.

TaskUs (client: Instagram) Remote, Philippines

Quality Analyst, Content Moderation

- Audited moderation decisions to check policy accuracy, studied performance data to find gaps in the process, and reported my findings to stakeholders.
- Helped improve the training materials for the team.
- Learned to be consistent with reporting, documentation and data analysis while handling a large volume of cases.

Teleperformance (client: AT&T Mobile) On-site, Philippines

Technical and Customer Support Representative

- Resolved inbound technical and account concerns in a high-volume environment, with careful documentation and careful handling of customer data.

Concentrix (clients: Apple, TripAdvisor) On-site, Philippines

Support Representative

1-800-Flowers

Customer Support (seasonal)

PORTFOLIO PROJECTS

Harborlight Data Architecture (Data Architecture, PostgreSQL, SQL, ETL)

A data architecture project that documents the data modeling, database structure and pipeline workflows, focused on making data systems reliable and easy to maintain.

github.com/jaymagayanes/harborlight-data-architecture

Exceptions Database Web App (Power Query, Dataverse, JavaScript)
Internal business tool that replaced a multi-sheet Excel workbook, with one combined structure, automated cleaning and a search page. Used by the team in production; the public repo has a sample-data version.
github.com/jaymagayanes/exceptionsDatabase_SearchPortal

NYC 311 Support Operations Analytics (Python, PostgreSQL, Excel, Power BI)
Analyzed 884,765 service requests and built a star-schema SQL model, an Excel dashboard and a Power BI report.
github.com/jaymagayanes/nyc-311-analytics

Global Education Intelligence Dashboard (Python, PostgreSQL on Supabase, R Shiny)
ETL pipeline for World Bank data across 261 countries (2000–2023), with a custom index, trend regression and a live dashboard.
github.com/jaymagayanes/global-education-intelligence

Support Ticket Routing Prototype (Node.js, Express)
Rule-based ticket classification with SLA logic, suggested replies and a simulated CRM sync.
github.com/jaymagayanes/ai_support

Zendesk Report Automation (Python, REST API)
Pulls ticket data through the API and generates CSV and HTML summary reports.
github.com/jaymagayanes/Zendesk-Report-Automation

EDUCATION

BS in Business Administration, University of Rizal System, Philippines 2015 – 2019

Diploma in Computer Programming, ICCT Colleges, Philippines 2012 – 2014
